

# PDFPreview

A basic previewer intended for pdf files, but which has evolved to include several other file types.

## Features

- \* Create/Delete favorites
- \* Folder navigation
- \* External folder navigation via drag & drop
- \* Open supported files in system default applications

## Usage

### Create a Favorite:

Create favorites by dropping a folder from the file browser on to the favorites pane. Note, only folders can be made favorites.

### Delete a Favorite:

Select the desired favorite and press delete.

### Rearrange Favorites:

Click on and drag a favorite and drop it wherever you'd like it to create any arrangement you'd prefer.

### Folder Navigation:

To instantly navigate to a location, drag and drop a file or folder from Windows File Explorer on the preview pane.

### Open Files:

Open a supported file in a system default application by pressing the spacebar while the file is selected.
