

# PDFViewer

A basic previewer intended for pdf files, but which has evolved to include several other file types.

## Features

Create/Delete favorites

Folder navigation

External folder navigation via drag & drop

Open supported files in system default applications

## Usage

### **Create a Favorite:**

Create favorites by dropping a folder from the file browser on to the favorites pane. Note, only folders can be made favorites.

### **Delete a Favorite:**

Select the desired favorite and press delete.

### **Rearrange Favorites:**

Click on and drag a favorite and drop it wherever you'd like it to create any arrangement you'd prefer.

### **Folder Navigation:**

To instantly navigate to a location, drag and drop a file or folder from Windows File Explorer on the preview pane.

### **Open Files:**

Open a supported file in a system default application by pressing the spacebar while the file is selected.
