PDFViewer

A basic previewer intended for pdf files, but which has evolved to include several other file types.

Features

* Create/Delete favorites

* Folder navigation

* External folder navigation via drag & drop

* Open supported files in system default applications

Usage

Create a Favorite:

Create favorites by dropping a folder from the file browser on to the favorites pane. Note, only folders can be made favorites.

Delete a Favorite:

Select the desired favorite and press delete.

Rearrange Favorites:

Click on and drag a favorite and drop it wherever you'd like it to create any arrangement you'd prefer.

Folder Navigation:

To instantly navigate to a location, drag and drop a file or folder from Windows File Explorer on the preview pane.

Open Files:

Open a supported file in a system default application by pressing the spacebar while the file is selected.
